

Supplementary Table S2. Variance inflation factor values for variables considered in the multivariate logistic regression, assessing the risk of iodinated contrast medium utilisation.

Variable	Variance Inflation Factor
Age>80 years	1.017
Male gender	1.231
Hypercholesterolaemia	1.028
COPD	1.033
CKD 3-5	1.014
Sac diameter >70 mm	1.023
Neck <15 mm	1.035
Neck diameter >28 mm	1.246
Clock position of the lowermost renal artery between 3-9	1.031
General anaesthesia	1.029
Percutaneous EVAR	1.015
30-day complication	1.374

AAA = abdominal aortic aneurysm; ICM = iodinated contrast media; COPD = chronic obstructive pulmonary disease; PAD = peripheral artery disease; CKD = chronic kidney disease; eGFR = estimated glomerular filtration rate; TIA = transient ischaemic attack; BMI = body mass index; EVAR = endovascular aortic repair.
