Table S1. Table of optimization for PTC alkylation of **15a** with benzyl bromide

X-ray crystallography

The compound **17aa** (9 mg) was dissolved in hot hexane (1.0 mL) and the resulting solution was cooled down at 4 °C. After 19 hours, chiral crystals suitable for X-ray diffraction analysis were obtained. A colorless prismatic single crystal of 0.56 mm × 0.38 mm × 0.27 mm was selected and mounted on a cryoloop with paratone oil and measured at room temperature with a Bruker D8 QUEST diffractometer equipped with a PHOTON II detector using CuK α radiation ($\lambda = 1.54178 \text{ \AA}$). Data Indexing was performed using APEX3.³ Data integration and reduction were performed using SAINT.³ Absorption correction was performed by multi-scan method in SADABS.³ The structures were solved using SHELXS-97⁴ and refined by means of full matrix least-squares based on F^2 using the program SHELXL.⁵ Non-hydrogen atoms were refined anisotropically, hydrogen atoms were positioned geometrically and included in structure factors calculations but not refined. ORTEP diagrams were drawn using OLEX2.⁶ The chirality on carbon atom C7 (R) was successfully assigned by anomalous-dispersion effects in diffraction measurements on the crystal (Flack parameter 0.07(5)).

	17aa
T (K)	296
Formula	$\text{C}_{20}\text{H}_{20}\text{O}_4$
Formula weight	324.36
