## Ecological patterns of polychaete assemblages associated with the Mediterranean stony coral *Cladocora caespitosa* (Linnaeus, 1767): a comparison of sites in two biogeographic zones (Adriatic and Aegean Sea)

Valentina PITACCO, Giorgos CHATZIGEORGIU, Barbara MIKAC and Lovrenc LIPEJ

*Mediterranean Marine Science*, 2021, 22 (3)

**Fig. S1:** Non-metric MDS ordination plot, based on species abundance data, comparing structure of polychaete assemblages between samples with different colony size from the Adriatic Sea.

**Table S1.** Taxonomic list with feeding guilds (TG) and biogeography groups assigned, and mean abundance and standard error (SE) of each taxa at the two sites in the Aegean (PIR, VOU) and the five sites in the Adriatic (RR, PR, STR, PA, DR). \*\* - species complex; \* - species with unresolved taxonomic/distribution status in the Mediterranean. HMJ = herbivore motile jawed, BMX = burrowing motile non-jawed, BSX = burrowing sessile non-jawed, CMJ = carnivore motile jawed, CMX = carnivore motile non-jawed, CDJ = carnivore discretely motile jawed, FST = filter-feeders sessile tentaculate, FSP = filter-feeders sessile pumping, SMJ = surface deposit feeders motile jawed, SMT = surface deposit feeders motile tentaculate, SDT = surface deposit feeding, discretely motile tentaculate, SST = surface deposit feeding sessile tentaculate; aa = amphi-Atlantic, am = Atlantic-Mediterranean, amr = Atlantic-Mediterranean and Red Sea, amp = Atlantic-Mediterranean and Pacific, amrip = Atlantic-Mediterranean, Red Sea and Indo-Pacific, c = cosmopolitan, d = disjunct distribution, iam = Indo-Atlanto-Mediterranean, m = endemic Mediterranean, mrip = Mediterranean, Red Sea and Indo-Pacific.

**Table S2.** Results of SIMPER analyses (cut-off 90%) used to identify taxa that mostly contribute to (A) polychaete similarity within geographic areas, (B) polychaete dissimilarity between geographic areas. Abund = mean abundance, Sim% = mean similarity, Sim/SD = similarity/standard deviation, Cont% = contribution relative to single taxon, Cum% = cumulative contribution, Av.Ab = mean abundance, Diss% = mean dissimilarity, Diss/SD = dissimilarity/standard deviation.

**Table S3.** Results of SIMPER analyses (cut-off 90%) used to identify taxa that mostly contribute to (A) polychaete similarity within the same depth and size class, (B) polychaete dissimilarity between depths and size classes in the Aegean Sea. Abund = mean abundance, Sim% = mean similarity, Sim/SD = similarity/standard deviation, Cont% = contribution relative to single taxon, Cum% = cumulative contribution, Av.Ab = mean abundance, Diss% = mean dissimilarity, Diss/SD = dissimilarity/standard deviation.

**Table A4.** Results of SIMPER analyses (cut-off 90%) used to identify taxa that mostly contribute to (A) polychaete similarity within the same depth and size class, (B) polychaete dissimilarity between depths and size classes in the Adriatic Sea. Abund = mean abundance, Sim% = mean similarity, Sim/SD = similarity/standard deviation, Cont% = contribution relative to single taxon, Cum% = cumulative contribution, Av.Ab = mean abundance, Diss% = mean dissimilarity, Diss/SD = dissimilarity/standard deviation.

(Ad = adriatic, Ae = Aegean), depths (3-6m, 6-8m, 15-19m) and colony sizes (small= <1 dm<sup>3</sup>, big= >1 dm<sup>3</sup>). S = taxa richness, N = abundance, H' = Shannon-Wiener diversity index, J = Pielou index of equitability, feeding richness (Sf) and feeding diversity (Hf). Significant p-values ( $p < 0.05$ ) are in bold.

**Table A8.** Results of SIMPER analyses (cut-off 100%) used to identify biogeographic groups that mostly contribute to similarity (A) within Aegean and Adriatic, and (B) dissimilarity (B) between Aegean and Adriatic Sea. Abund = mean abundance, Sim% = mean similarity, Sim/SD = similarity/standard deviation, Cont% = contribution relative to single taxon, Cum% = cumulative contribution, Av.Ab = mean abundance, Diss% = mean dissimilarity, Diss/SD = dissimilarity/standard deviation. Explanation of abbreviations are in Table A1.
