Evaluation of Landsat-9 interoperability with Sentinel-2 and Landsat-8 over Europe and local comparison with field surveys

F. Trevisiol, E. Mandanici*, A. Pagliarani and G. Bitelli

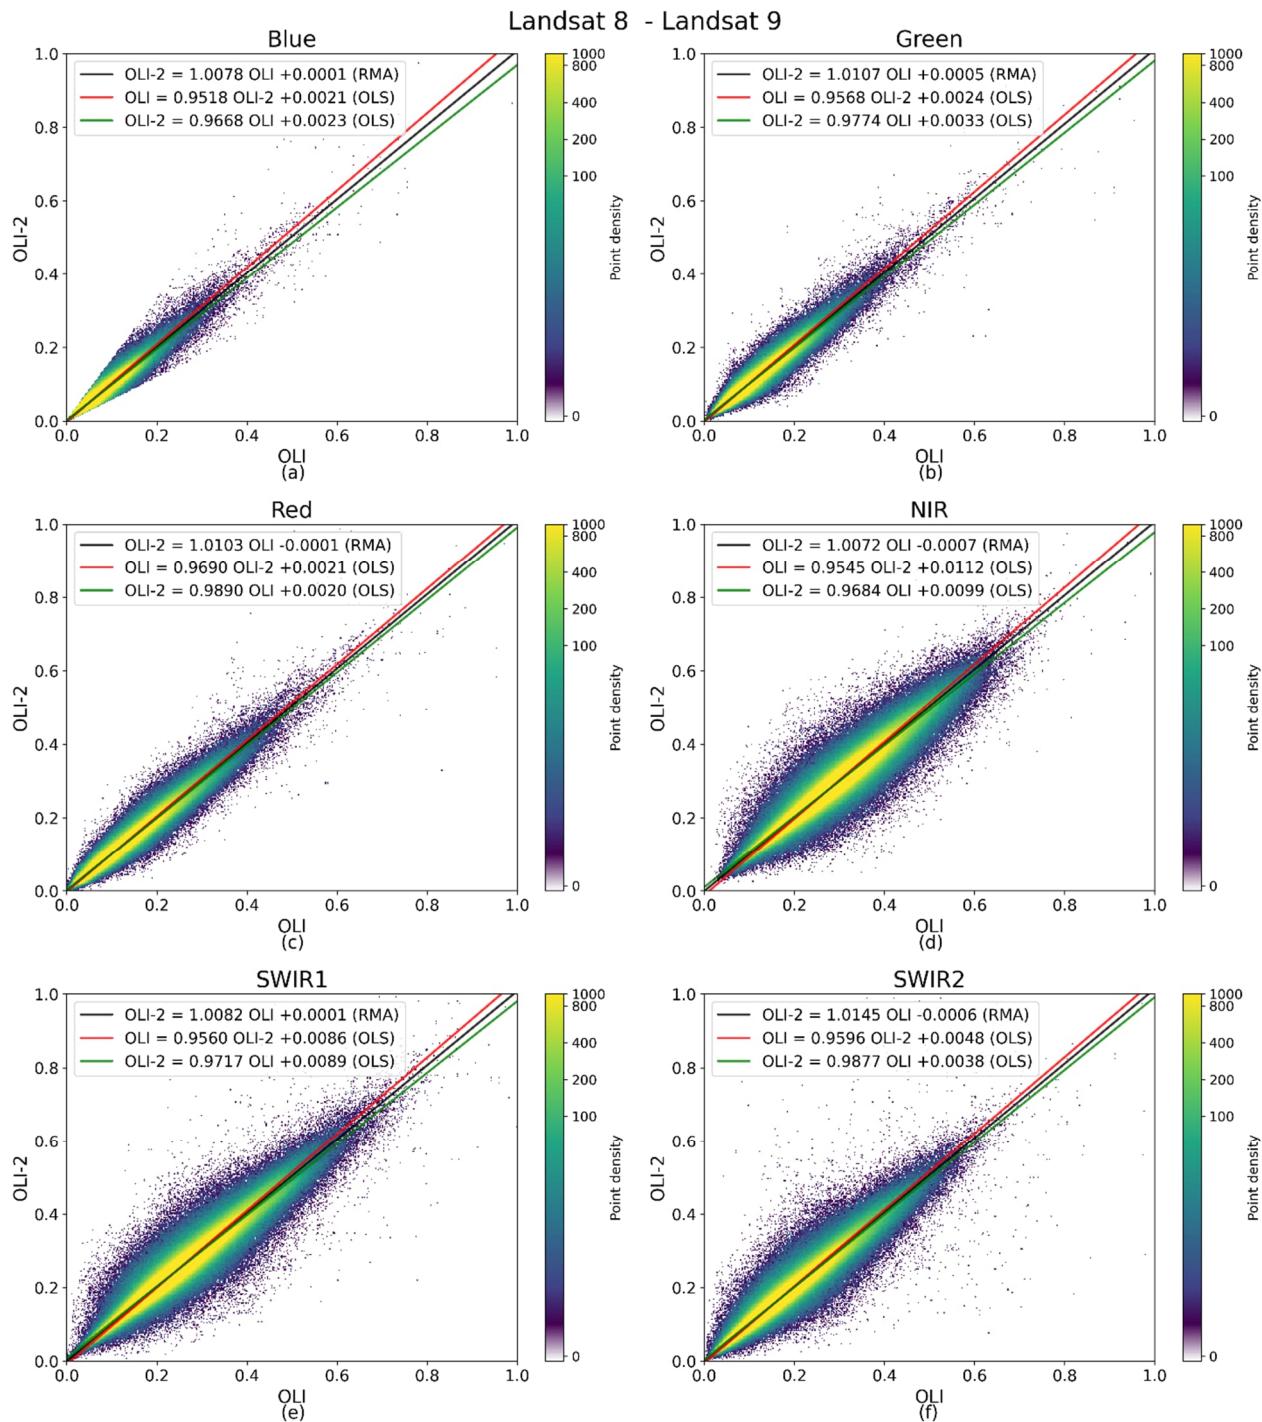

SM1: Histograms of the differences in reflectance between L8 and L9 for all the common bands.

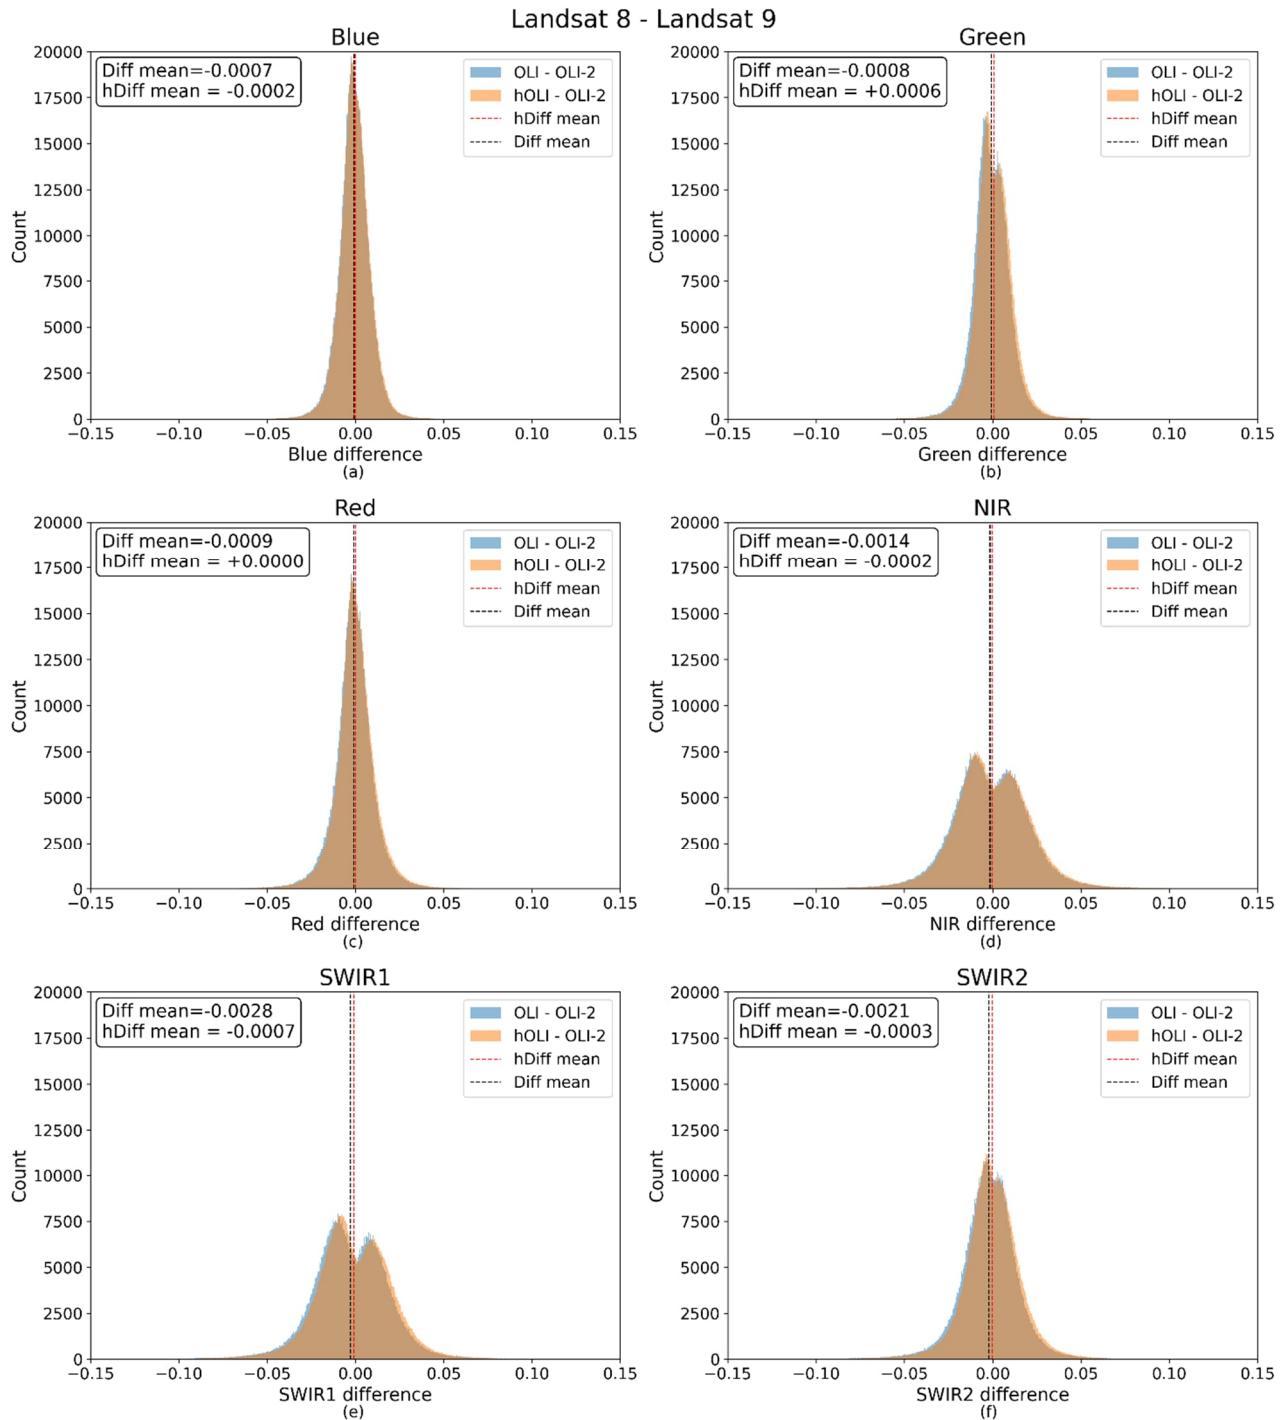

SM2: Histograms of the differences in reflectance between S2 and L9 for all the common bands.

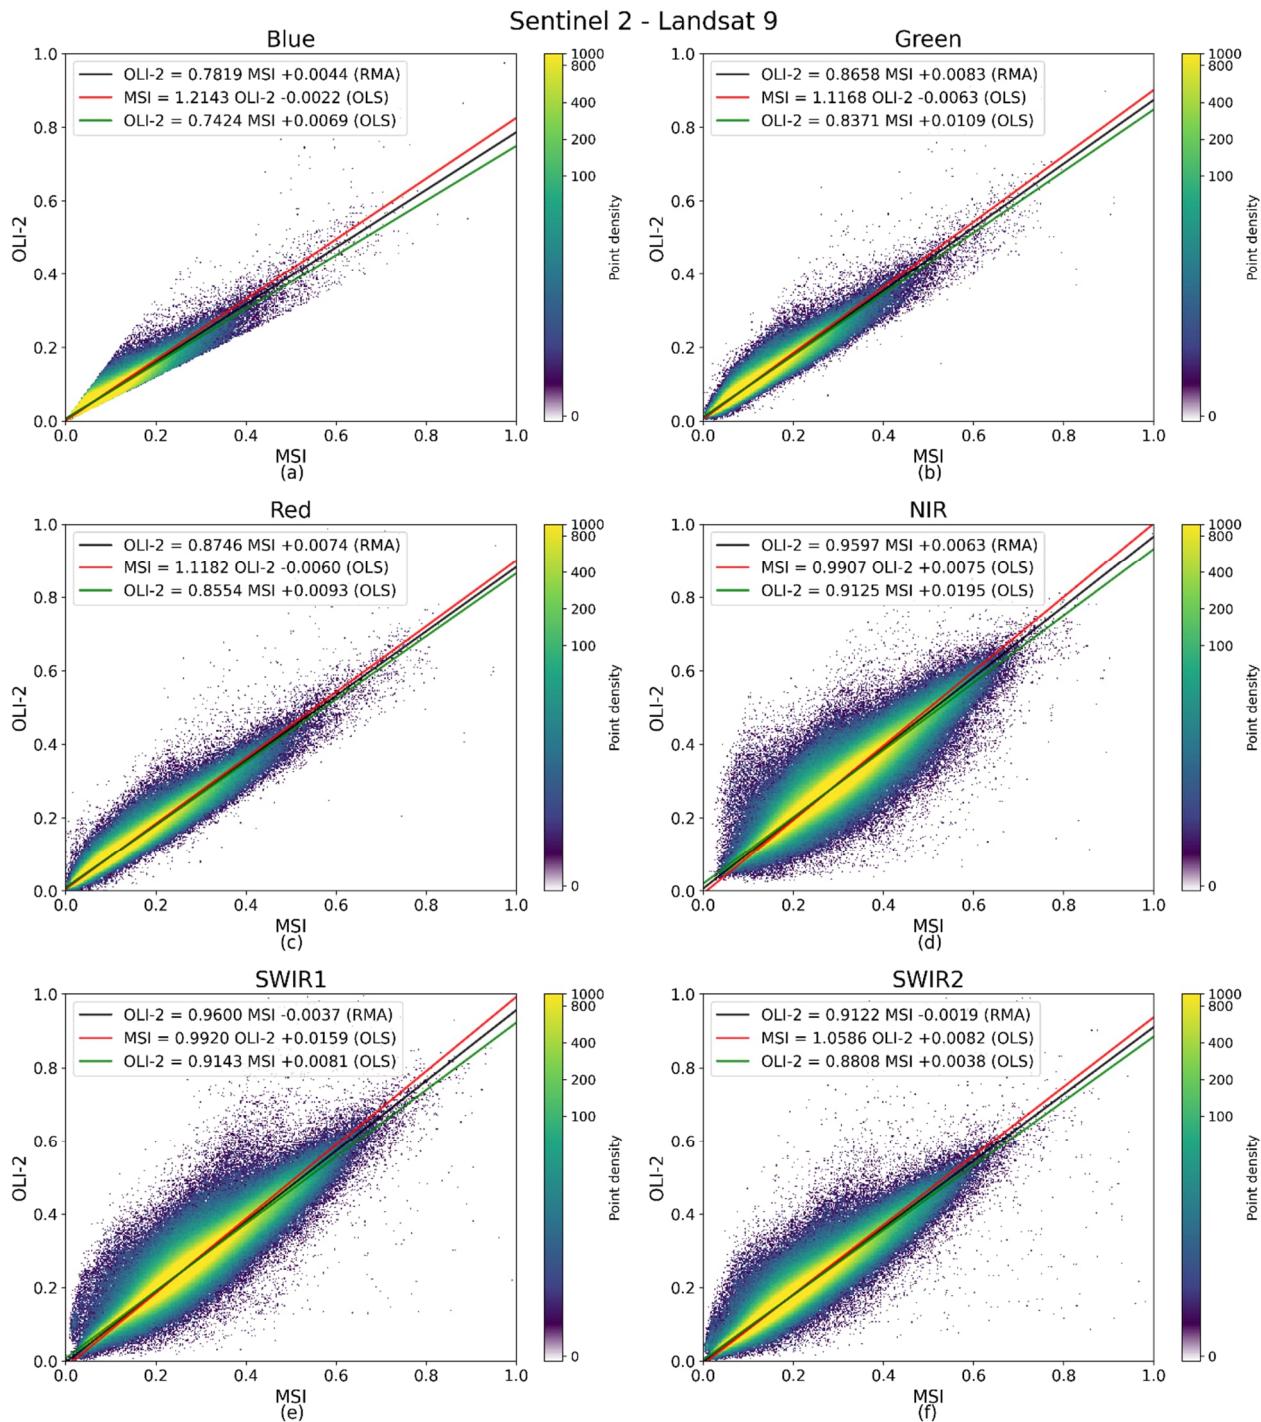

SM3: Scatterplots of the reflectance values for L9 OLI-2 (vertical axis) against L8 OLI (horizontal axis) in the a) Blue, b) Green, c) Red, d) NIR, e) SWIR1, f) SWIR2 bands. The plot colours illustrate the frequency of reflectance values with logarithmic scale. The solid lines show the three regression fits.

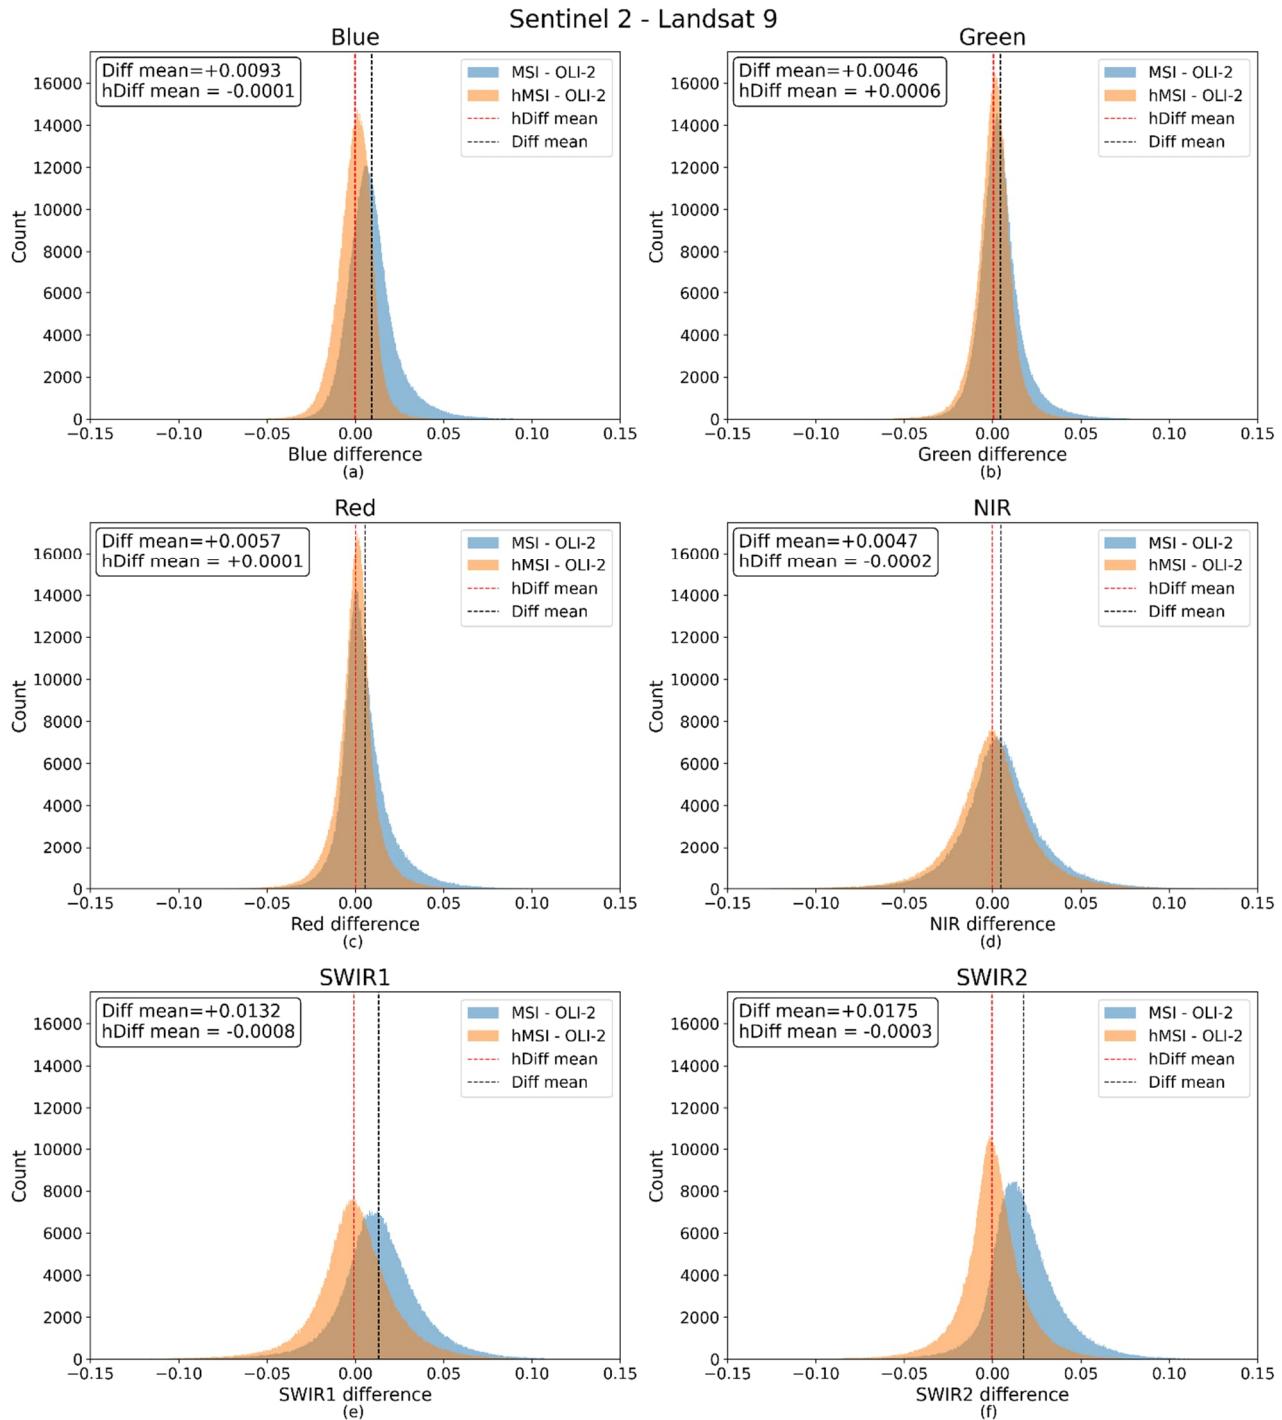

SM4: Residuals distribution of OLI-2 and OLI applying the RMA coefficients (OLI-2 independent variable) for Blue (a), Green (b), Red (c), NIR (d), SWIR1 (e) and SWIR (2) bands, compared with the original paired observation differences. Dashed lines represent the mean values.

SM5: Scatterplots of the reflectance values for L9 OLI-2 (vertical axis) against S2 MSI (horizontal axis): a) Blue, b) Green, c) Red, d) NIR, e) SWIR1, f) SWIR2. The plot colours illustrate the frequency of reflectance values with logarithmic scale. The solid lines show the three regression fits.

SM6: Residuals distribution of OLI-2 and MSI applying the RMA coefficients (OLI-2 independent variable) for Blue (a), Green (b), Red (c), NIR (d), SWIR1 (e) and SWIR (2) bands, compared with the original paired observation differences. Dashed lines represent the mean values.

SM7: Contemporary Overpass Event (COE) with location, date (dd/mm/yyyy) and time (UTC +1) of the surveys.

zone	id	Land Cover	Coordinate	COE	Survey time (UTC + 1)	Survey date
Reggio Emilia	M1	Turf	44° 33' 47.809" N 10° 46' 13.427" E	A	11:49-11:57	03/03/2022
